进水口与水渠(旧河道)

Intake and waterway (Former river channel)

荒川太郎右卫门地区 自然再生项目 Arakawa Tarouemon Area

Arakawa Tarouemon Area Nature Restoration Project

•现有水渠(标高A.P.+10.9m)保留原样,在其旁边建设新的进水口(标高A.P.+10.3m), 以提高汛期流入频率,恢复旧河道水域。

The existing waterway (elevation A.P.+10.9m) was left as it was and a new river intake (elevation A.P.+10.3m) established beside it in an undertaking to attempt to raise the inflow frequency and restore the water surface of the former river channel.

新设引水渠进水口,恢复水域

Restoration of the water surface through the establishment of a new intake on the inflow channel

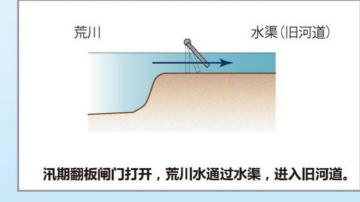

新设进水口,提高干流的流入频率

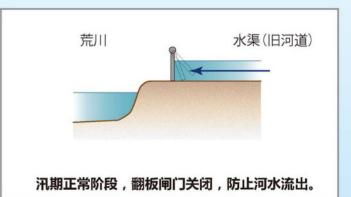

The establishment of a new intake has raised the frequency of inflow from the main river

采取措施,避免流入水轻易泄出

A mechanism to inhibit drainage of the water inflow
